06 MOVE

More ways we make mobility work.

Cyprus Motorist Hub

DEPLOYABLE MVP · DEMO DATA IS SYNTHETIC

One screen for everything a Cyprus driver has to remember, check and do.

3	9	AA
LANGUAGES · EN EL RU	DATA SOURCES	WCAG 2.1 TARGET

BikeStat

COLLECTOR + OFFLINE ANALYSIS

Turns the public Nextbike Cyprus feed into a minute-by-minute history of shared bikes.

00h — estimated rentals by hour of day · 15–24 June 2026 — 23h

12,590	4,774	~455
SNAPSHOTS	BIKES SEEN	ESTIMATED RENTALS A DAY

Rentals are analytical estimates from open data, not paid transactions.

BusRider

WORKING SCAFFOLD

Book a seat on the bus to your exam — the routes plan themselves.

ExamRide

LOCAL PROTOTYPE

A light request form for rides to exams, with a coordinator panel.

Zelo e-bikes

APP, BACKEND AND ADMIN IMPLEMENTED

Rent an e-bike from your phone — verified, booked and paid in minutes.

CyTransit AI

RESEARCH & PROPOSAL

Our research plan for AI-driven public transport in Cyprus.

Demand fusion · ETA & reliability · Network optimiser · Real-time control · Digital twin · Decision dashboard

A proposal: no award, contract or deployment is implied.

NEXT STOP: YOUR ROUTES

Bring your routes. Let's make them clearer.

We help operators, municipalities, schools and tour companies publish clean timetables, check them automatically, track vehicles and set schedules from evidence.

Play Beat the Bus

60 seconds, real Nicosia data. Can you beat the official timetable?

abasis-ltd.github.io/cyprus-in-motion/play

Explore all 12 projects

Maps, videos and the full story online.

abasis-ltd.github.io/cyprus-in-motion

Request a transit-data review — at the stand or via **abasis.ai**:

- GTFS creation & editing
- Feed validation — **gtfs.guru**
- Phone-based vehicle tracking pilots
- Observed timetables & arrival predictions

Ab Abasis.AI

Nicosia, Cyprus · abasis.ai · gtfs.guru
Figures from local project data as of 27 Oct 2026. Proposals and prototypes are labelled as such; no deployment or partnership is implied.

Ab Abasis.AI

MOBILITY LAB · EXPO EDITION

Cyprus in motion.

Tools to create, validate, track and predict public transport — built on every bus line on the island.

12 projects · create, validate, track, predict, understand, move

01 CREATE · 02 VALIDATE · 03 TRACK · 04 PREDICT · 05 UNDERSTAND · 06 MOVE

860	5,249	29,905
BUS ROUTES	STOPS	SCHEDULED TRIPS

Map: 652 real route shapes from the public GTFS feeds of 7 operators

01 CREATE

From spreadsheet to standard feed.

GTFS Web Editor

BUILT · ARCHIVED SUMMER-2026 FEED

Turns an operator's spreadsheet timetable into a standard GTFS feed that journey planners can read.

Kapnos Airport Shuttle · Limassol Airport Express

4	12	5,955	16,076
AIRPORT ROUTES	STOPS	TRIPS	STOP TIMES

Kapnos Airport Shuttle feed, valid 5 Jul – 31 Aug 2026 (archived release).

Limassol Airport Express

FEED + GENERATOR SCRIPTS

2	274	€10 / €5
ROUTES · L1 LCA, L2 PFO	TRIPS	ADULT / CHILD FARE

02 VALIDATE

Catch the error before the journey.

GTFS Guru

PUBLIC PRODUCT · LIVE AT GTFS.GURU

Finds the errors in timetable data before riders do — and says exactly what to fix.

Netherlands national feed · 16.0M stop-time rows

GTFS Guru	9.75 s
Java validator 8.0.1	65.18 s

110	6.7×
CHECKS	FASTER ON A 16M-ROW FEED*
0 kB	**Apache-2.0**
UPLOADED FOR A FILE YOU PICK	OPEN SOURCE

*Published whole-pipeline benchmark vs the canonical Java validator 8.0.1 on an Apple M3 Pro: 9.75 s vs 65.18 s (Netherlands, 16.0M stop-time rows), 2.32 s vs 10.60 s (MBTA). Rule sets differ.

03 TRACK

Start with the driver's phone.

School Bus Tracker

TRACKING FOUNDATION BUILT · SCHOOL PILOT PLANNED

Live bus tracking from the driver's Android phone. No tracking boxes to buy or install.

1. The driver logs in, picks the vehicle and route, and starts the trip
2. The phone reports its position to a lightweight Go + PostgreSQL server
3. Dispatchers see every bus on a live admin map
4. A standard GTFS-Realtime feed comes out for any app

NEXT: PARENTS

- Parents see only their child's bus
- Protected school coordinates
- 30-day history retention
- Pilot with 5–20 buses

Built on the open-source OneBusAway vehicle-positions project.

04 PREDICT

When the GPS goes quiet, the bus stays on the map.

Shadow GTFS-RT API

PREDICTION ENGINE BUILT · DEPLOYMENT NOT AUDITED

When live GPS drops out, our model keeps the bus moving on the map — always marked as an estimate.

input	30 s	learned	on road	output
Live feeds	Collector	CatBoost	Kalman	GTFS-RT

1. A collector archives every Cyprus operator's feed every 30 seconds
2. A CatBoost model learns how each route really moves — by hour, day, stop and slope
3. A route-constrained Kalman filter keeps the estimate on the road
4. The result is served as a standard GTFS-Realtime feed

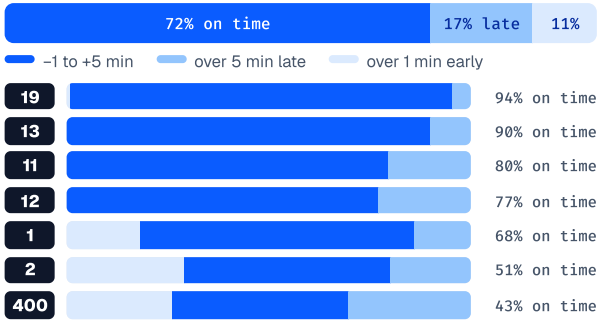

7	30 s	51.7M
OPERATORS ARCHIVED	POLLING INTERVAL	GPS POSITIONS

05 UNDERSTAND

Planned vs. what really happens.

Since 21 July 2026 we have archived every public bus feed in Cyprus — 51.7M GPS positions and 11.9M stop passages over 98 service days.

ONE STOP · EIGHT MONDAYS · MINISTRY OF FINANCE, NICOSIA

1,174 GPS-observed passages · early | on time | late · GPS passages are not boarding records

ROUTE 11 · TYPICAL MONDAY MORNING

TIMETABLE	TYPICAL	USUAL RANGE	DIFF, MIN
07:03	**07:05**	07:04–07:06	+2.1
07:32	**07:45**	07:36–07:51	+12.8
08:02	**08:16**	08:09–08:24	+13.6
08:32	**08:35**	08:34–08:35	+2.6
09:02	**09:07**	09:05–09:09	+4.7

Observed & predicted timetables

OFFLINE REPORTS AND MODEL EVALUATION

−25.7%

MEAN ARRIVAL ERROR VS THE PUBLISHED TIMETABLE

Published timetable	4.94 min
Historical median	3.71 min
Our CatBoost model	3.67 min

260k	82%
HELD-OUT TEST ARRIVALS	INSIDE THE P10–P90 BAND

Mean absolute error 4.94 → 3.67 min on 12–26 Oct 2026. Most of the gain comes from historical medians; a fresh independent evaluation is still to come. GPS passages are not boarding records.
